

CLAIMS

What is claimed is:

1. A wearing article provided with bamboo carbon material, comprising a disposable wearing article like a diaper for babies which is mainly made up of a belly pad section, a thin film with diagrams defined thereon attached at the front side of the belly pad section thereto, and a wrapping section with two buckling pieces attached at both lateral sides thereof to be fastened to the thin film respectively in buckling engagement thereby; the present invention being characterized by that,
 - the diagrams of the thin film being provided with dark ink having bamboo carbon powder added therein;
 - a releasing paper with a fastening facet attached at one side thereon being applied to the inner lateral side of the buckling piece thereof, and a fastening agent layer with bamboo carbon powder added therein being laminated at the corresponding inner side of the buckling piece and the releasing paper there-between;
 - the bamboo carbon powder being made of carbonized old bamboo grown for over 4 years and burned at a high temperature before ground into powder for use;
 - via the bamboo carbon powder of strong adhesive and dissolving capacities, the disposable wearing article thereof is equipped with the functions of anti-bacteria, humid-adjustment, and deodorization to easily absorb and dissolve some harmful chemicals such as sulfide, nitride, methanol, benzene, or carbolic acid, etc., or defeat bugs; meanwhile, infrared suitable to the absorption of human body for good blood circulation and body health is produced, and beneficial

negative ions are increased in the air to balance the humidity and achieve anti-bug design, efficiently boosting the quality and effects of the disposable wearing article thereof.
